

Annual laneway pruning and weed control

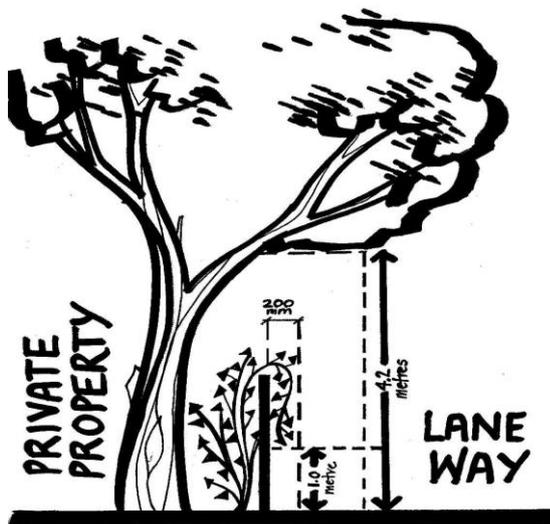

Weed control

The City undertakes chemical weed control on footpaths, traffic islands, kerbs and laneways using Roundup Biactive throughout the year. Roundup Biactive is a non-volatile, water-soluble liquid with non-selective herbicidal activity against weeds. Roundup Biactive is effectively neutralised on contact with the soil and does not provide residual weed control.

The city maintains a chemical weed control exemption register listing all exempt properties. If you have previously requested to be exempt from the chemical weed control, you can check to ensure your property is still listed on the register by contacting the city on 9387 0942. All property owners/occupiers who wish to be exempt are required to keep the kerb and footpath adjacent to their property weed free to the same standard that will be achieved by the chemical control method.

Annual laneway pruning

The annual laneway pruning program will commence in July. The city will prune or remove vegetation as required, to the following specification:

1. Vegetation growing within the laneway will be removed.
2. Vegetation overhanging into the laneway:
 - at fence lines, a clearance of one metre above ground level
 - up to 4.2 metres above ground level, a clearance of 200mm out from the fence lines
 - vegetation that is higher than 4.2 metres above the ground and is dead will be pruned if necessary

All property owners/occupiers who wish to be exempt from the city's laneway pruning program are required to ensure the above guidelines are complied with.

If you wish to have your property exempt from either the weed control or laneway pruning, please advise the city in writing by 30 June by filling in the coupon below and sending it to City of Subiaco, PO Box 270, Subiaco WA 6904. Alternatively, send an email to city@subiaco.wa.gov.au with your address and contact details.
